

Real-Time HABs Sensors for Drinking Water Treatment

Presentations by:

Brenda Snyder - University of Toledo

Ed Verhamme - LimnoTech

Paul Nieberding - Fondriest Environmental

WEBINAR

This webinar will discuss how HABs sensors are used in water treatment plants across Ohio to monitor for the presence and abundance of cyanobacteria in raw water. This session is intended to provide insight into the equipment needed, discuss how operators use data from the sensors in real-time, and how the sensors might help minimize treatment and monitoring costs.

Please register for use of real-time HABs sensors for drinking water treatment on Dec 16, 2015 11:00 AM EST at:
